

## How to take care of your tattoo:

After removing the foil, clean the wound with cold water and ph-neutral soap. Dab dry carefully with cellulose.

Please don't use any towels or washing clothes to avoid getting bacteria into the wound.

In the morning and evening put on the ointment thinly.

Before, always clean the wound with water and ph-neutral soap.

It's important to use the ointment thinly and not thick, since it can clog up your pores and cause the wound to ooze. This can lead to infections and a loss of the tattoo color.

In the first weeks the wound is similar to a scrape.

When the scab starts loosing it can cause itching. Please don't scratch.

**After 3 weeks please visit us for a follow-up check.**

What you should avoid in the first days:

- no sport that is straining or causes heavy sweating
- no poolside (for 2 weeks)
- no sauna (for 2 weeks)
- for 4 weeks don't let the sun directly shine onto the tattoo
- no solarium (UV light delays healing process and causes the color zu fade)

Please follow the above care instructions on your own behalf. They are based on practical experience and proved efficiency.

**In case of questions or complications just call us by phone or visit us in our studio.**

**You bear the risk and responsibility for a smooth healing process as well as the care of your tattoo since we aren't able to control it. We won't take responsibility for possible damage of the tattoo that is caused through your own negligence and irresponsibility.**
